Additional Information

I am an undergraduate student currently studying towards a BSc in Physics at Imperial College.

I can code in both python (intermediate) and C (intermediate) and enjoy working with both hardware and software.

In my spare time, I am working with friends to restart the Space Society's high-altitude ballooning program. Initially we are looking at how UV levels change with altitude.

Outside of my degree I am involved in university sports clubs, I have served as the chair of the Ju-Jitsu Club and am currently secretary for the Lacrosse Club.
